Currently learning - Azure Cloud Services & Algorithms and Data Structures in C#

LANGUAGE

Georgian

English — Intermediate (B1)

WORK EXPERIENCE

public service development agency

Full-Stack Developer

2023 - present

PROJECT

mdShop eCommerce Web Application

- Built a fully functional eCommerce platform using React for the frontend and .NET Core for the backend.
- Implemented JWT-based authentication, an admin dashboard, and modules for managing products, users, and orders.
- Designed reusable components with Styled-Components and optimized state management using React Context API.

User Management System

- Developed a user management system using C# (.NET) for the backend and React.js for the frontend.
- Implemented role-based access control, user registration, and profile management features.
- Improved security and performance through backend optimization and REST API structure.

GameForge eCommerce Platform

(React, .NET Core, MS SQL Server)

- Developed a full-featured eCommerce web platform for selling game keys, accounts, and digital gift cards.
- Built a responsive frontend with React.js and a secure backend API using .NET Core connected to MS SQL database.
- Implemented dynamic price control, advanced filtering and sorting (by popularity, discount, or price), and role-based access for admins and users.
- Integrated authentication system with login/registration, and added secure payment processing functionality.
- Designed an admin panel for managing products, discounts, and user roles.
